

The Need for

# CIRCULAR TEXTILES

## Circular Products & Materials →

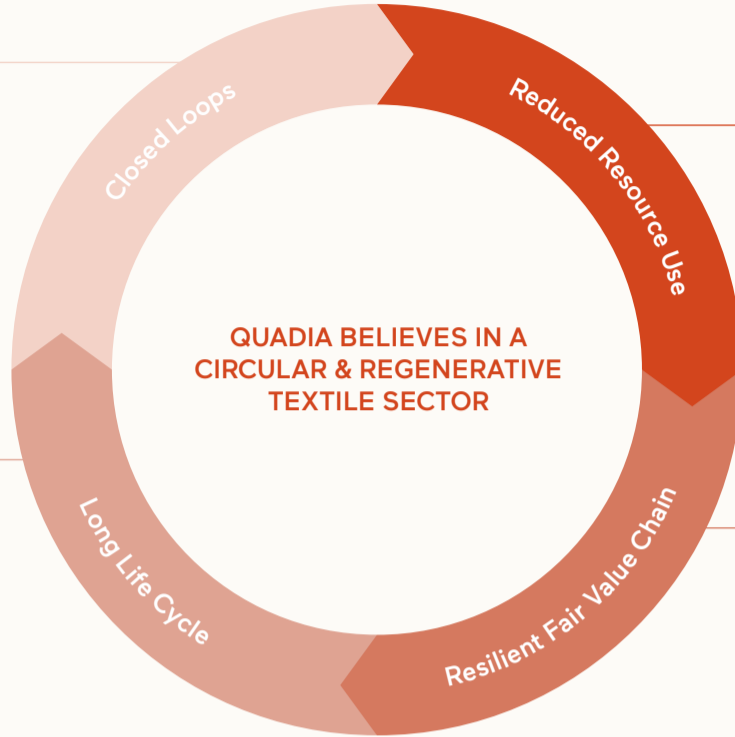

**+2M tons**  
of fabrics are disposed every year in the EU

**Less than 1%**  
of this is used to make new clothing

**Each 2 weeks**  
New clothing collections are released in a major high-street retailer

**2,700**  
Liters of water for 1 t-shirt  
**= 2.5**  
Years of water for 1 person

**60%**  
of clothing in the EU is produced elsewhere including in some countries with poor working conditions, safety issues and using hazardous substances

## QUADIA AND ITS INVESTORS

are already contributing to this transition supported by the EU through its **European Green Deal 2050 Plan** and the **EU Strategy for Textiles** that will be released in 2021

We have been working in this direction with investments in ↓

### THE RENEWAL WORKSHOP

The Renewal Workshop allows the fashion industry to build circular models through renewal of discarded garments.

Already working with brands like The North Face and H&M to make the circular textile industry happen.

**+105**

Tons of clothes discarded from landfill

### ANANAS ANAM (PIÑATEX)

Ananas Anam uses pineapple production waste to produce an innovative natural textile, called Pinatex, used in the fashion and automotive industries.

Contributing to the reduction of the significant negative environmental impact of the industry.

**1070**

tons of discarded biomass used to make Pinatex in 2019

By driving private and institutional wealth towards innovative solutions, we go beyond simple capital allocation, we seek to create virtual circles where natural and social capitals are an integral part of our bottom-up approach toward regenerative economy.

CAPITAL REGENERATED
